

DAKIN CAPITAL LLC

PRODUCT DEMONSTRATIONS

SterilSafe is selling air disinfection biotechnology equipment (ADB) that can quickly, continuously and substantially kill pathogens in the air.

Based upon laboratory testing and case studies of prior equipment installation in different types of public venues, it is expected that operation of the equipment at a demonstration site will achieve the following results:

- Dramatic reduction in the possibility of transmission of COVID-19
- Obtain scientific, third-party validated data that can meet the 'above and beyond' requirement to obtain Colorado 5 Star Certification or similar state programs to obtain a variance allowing for higher occupancy levels
- Increased revenue from re-opening and/or increased occupancy levels
- Enhanced air quality providing a healthier environment for both employees and customers
- Reduced cost in both special and standard cleaning practices
- Reduced cost of facility ventilation (return to normal levels from increased air exchange rates)

Dakin Capital is an authorized Sales Associate of SterilSafe and is offering to selected public venues the opportunity to temporarily place ADB equipment, operate it for 7-10 days and to collect air and surface samples to measure pathogen reduction. Dakin Capital will bear all the costs of the demonstration.

Any public venue that is interested in this opportunity should notify Dakin Capital.

As a condition of selection of the public venue, the public venue must consent to allow observation of the demonstration by individuals designated by Dakin Capital and to allow publication of the demonstration results.

A room within a building should be designated as the site for the demonstration. Information on the room must be supplied that provides the dimensions (width, length and height), existing air ventilation and room layout that includes location of walls or other obstacles to air flow.

Dakin Capital will work with SterilSafe to determine the duration of the demonstration, the appropriate equipment model to use in the demonstration and arrange for shipment of the equipment to the site. Portable models may be self-installed and activated. HVAC models will require a technician install and activation.

Prior to activation of the equipment, air and surface samples will be collected and submitted to a third-party laboratory – Scientific Air Solutions - for testing. Dakin Capital will arrange for a technician to collect the samples.

Upon activation, additional air and surface samples will be collected at the following times:

- 5 minutes
- 10 minutes
- 15 minutes
- 30 minutes
- 1 hour
- 1 day
- Upon completion of the demonstration at 7 to 10 days

Testing is emphasized immediately after commencing operations to capture data on the ability of the equipment to kill eliminate pathogens continuously and rapidly in the air between the time when one person exhales and another person inhales.

At the end of demonstration, the equipment will be removed.

Upon receipt of testing results from the laboratory, a report will be generated that will show:

- Reduction of pathogens in the air over time during the demonstration
- Reduction of pathogens on surfaces over time during the demonstration

Where the public venue is subject to government mandated lockdown and/or occupancy restrictions, the reports may be submitted in support of a request for variance from local health department orders to obtain authorization to re-open and/or to raise occupancy levels.

The results will be reviewed with the manager of the public venue.

It is anticipated that the results of the demonstration will show:

- a rapid reduction of pathogens in the air exceeding 90% within the demonstration period.
- A slower reduction of pathogens on surfaces exceeding 50% within the demonstration period.

Upon completion of the demonstration, the public venue may request a proposal to purchase ADB equipment for the room, building floor or the entire building.

Sincerely,

Karl Dakin
